Case Study No.2

Team Details

TEAM NAME: Tech Titans

TEAM LEADER: DHANUSH P(3rd year-BIOTECH)

TEAM MEMBER 1:SABAREESHWARAN S(3rd year-BIOTECH)

TEAM MEMBER 2:SUJAYPRANAV P S(3rd year-COMPUTER SCIENCE)

Predictable Code Development for Service Oriented Application using GenAI

Concept: AI-Driven Service Blueprint Generator (Design → Code)

- Converts natural language business requirements into complete service blueprints including APIs, data models, and service logic.
- Generates services using predefined, best-practice templates to ensure consistency, scalability, and loose coupling.
- Same inputs always produce the same structured output by using controlled prompts and fixed design rules.
- Automatically includes input validation, error handling, authentication hooks, and logging mechanisms.
- Reduces manual design effort, speeds up development, and minimizes human errors in service creation.

Conclusion:

- The AI-Driven Service Blueprint Generator ensures predictable, reliable, and standardized service development by bridging business requirements and implementation.
- It significantly accelerates SOA development while maintaining quality, security, and architectural consistency.
